Low Voltage Remote

Switch Panels

The **LVP Remote Low Voltage Control Panels** are available in multiple configurations. Our panels may be used with ANY brand of vacuum or compressor that uses 24-volt AC control wiring.

The sealed rocker switches are superior to the cheap push on / push off type used by competitors. Spade Connect terminals make replacement a snap.

Each panel comes complete with mounting screws and wire connectors.

UNMATCHED EXPERIENCE

I-vac Services Inc. has designed and fabricated some of the nation's largest dental college compressed air & vacuum systems as large as 230 users.

We routinely design custom NFPA Level I & II Systems for medical applications, which must be certified to perform as specified.

I-vac Services Inc. provides products that meet or exceed NFPA specifications!
